

ELECTRIC VEHICLE CHARGERS

Electron Charger provides Level-2 and Level-3 EV charger hardware, mounting stands, cable management, and software control solutions. Our industry experience can help you acquire fast and reliable EV charging for your installations.

Level-2 Commercial 48A (11.5kW)

Billing software compatible for public or private use with RFID or mobile phone authentication. This charger can be used as a public facing unit for monetization or as a private or corporate charger. Any commercial or private application can be fulfilled with this dependable EV Charger.

Level-2 Commercial 80A (19.2kW)

Billing software compatible for public or private use with RFID or mobile phone authentication. Fleet compatible for higher speed charging. This charger can be used for many different applications where a faster AC charging product is required.

Level-3 Commercial High Speed (30kW)

Public or private use with RFID or mobile phone authentication. Fleet compatible for highest speed charging. This Level-3 charger can get your vehicle charged much quicker than the AC charger versions. With direct DC input into your vehicle this unit delivers speed, control, and reliability.

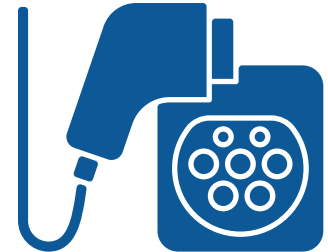

EV CHARGER

Software Control

EV charging for commercial and communities

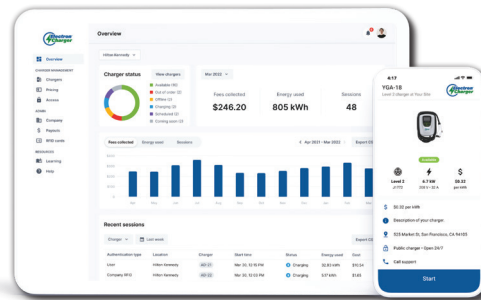

For electric vehicle (EV) chargers to be effective, they require software that enables drivers to use phone apps for charging, while hosts/owners use back-office control software for billing and scheduling of the chargers. **ElectronCharger** provides a fully integrated system where the phone app, back-office software and charger hardware all work together perfectly.

Easily Manage and Control Your Charging Stations

Managing EV charging can be made simple, and ElectronCharger's software provides the site operator with control over unique management plans. View power usage and individual charger usage in real-time and use the enhanced system reporting to help you optimize your revenue.

Complete back-office control allows the operator the ability to create revenue plans for each different situation, such as billing by kilowatt hour, or billing for the parking space. You have direct control over each charger and you can set up groups per location or per company.

Who We Serve

 Parking Garage Operators	 Multi-Unit Dwelling	 Public Shopping Parking	 Schools and Universities
 Hospitality	 Hospital and Medical	 City and County Fleets	 Commercial Fleet Charging

⚡ Management Benefits

- Multi-user access to the back office control platform.
